11PH

All of the above
[one Cover comes with
Heater attached]

Tools required:
#1 Phillips screwdriver
(not included)

#7 #1 #2 #3

ASSEMBLING THE PET HUTCH

- 1** Place Door Section [#2] on a flat surface. Make sure the door opening has the flat edge down.
- 2** Take a Plain Section [#1] and with the vent holes on top, carefully match up the two sets of notches, then gently push them together until they fit snugly. Repeat this with the other Plain Section [#1] on the other side of the Door Section [#2].

- 3** Complete circle by placing the Slotted Section [#3] between the two Plain sections. Make sure the slot is facing down.

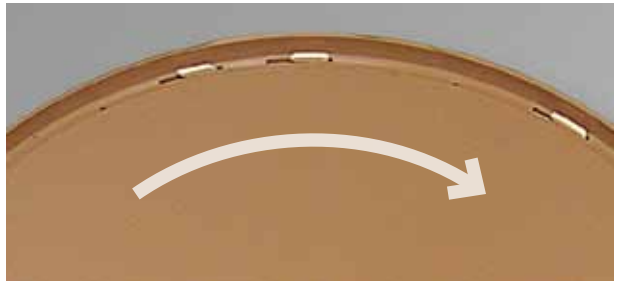

- 4** Place the Bottom Cover [#7] over the assembled Wall Sections and carefully fit the slots in their respective latches/hooks. The Cover should fit snugly onto the edges of the Wall Sections.

- 5** With Cover [#7] fitting securely over the Wall Sections, rotate the Cover counter-clockwise (in direction of arrow) until the Base cannot move (about 1/4").

- 6** Turn the semi-completed unit upside down and install the Cover [#2] top cover in the same way as step 5. FOR THE MODEL 11PH HEATED PET HUTCH ONLY: Pass the Heater cord through the notch in the Slotted Section.

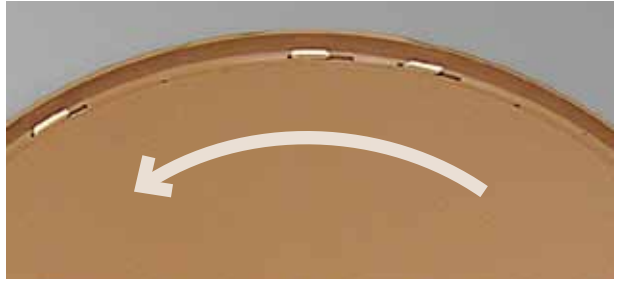

- 7** With Cover [#2] fitting securely over the Wall Sections, rotate the Cover clockwise (in the direction of the arrow) until the Cover cannot move.

- 8** Finally, locate the small holes along the groove (see picture at right) and lock the Cover down with two of the Locking Screws [#6] provided.

9 Flip the Hutch over and repeat step 8 for the other Cover.

Buy Two and Build Your Own Pet Condo

Just flip over the top of the bottom unit and stack them.
